

National BIM Standard - United States™ Version 2

4 INFORMATION EXCHANGE STANDARD

Chapter 4.5 Design to Quantity Takeoff for Cost Estimating

Introduction

Design to Quantity Takeoff for Cost Estimating (QTO) is an open, IFC-based BIM information exchange that enables designers and building owners to assess the quantities of materials and manufactured products in a building design, and by extension, to project the construction cost of that building design. A QTO analysis application loads the Building information Model (BIM) and a database of construction recipes. By taking measured quantities of the BIM objects, the application can project the construction cost.

In 2008, buildingSMART and the Open Geospatial Consortium led a large project in which an early version of this Information Exchange was used. Dozens of industry leading companies participated in the AECOO Testbed project, which demonstrated successful exchange of a BIM, followed by quantity takeoff and cost estimating in an analysis application.

The primary drivers for the Testbed and subsequent development for this Information Exchange were several building owner organizations. These building owners supported this development because of the real need to better assess projected construction costs during the design phase of their building projects. These organizations are beginning to use BIM exchange for QTO in their projects. These organizations include: GSA, Statsbygg, and Senate Properties. Driven by these organizations BIM programs, several software organizations have already implemented, or are now implementing support for this BIM information exchange in their products. These include: Autodesk (Revit and AutoCAD Architecture), Bentley (during AECOO), DDS (DDS-CAD), Graphisoft (ArchiCAD), Beck (dProfiler), Tocoman (TCM QTO), Tokmo (during AECOO), and Digital Alchemy (IFC QTO).

More information about this program can be found on the GSA BIM/4D/3D Program web site and in the GSA BIM Guide for Series 07 of their BIM program. More detail, including the Information Delivery Manual (IDM) and Model View Definition (MVD) can be found on the IFC Solutions Factory Website.

Information Exchange

Chapter 4.5– Design to Quantity Takeoff for Cost Estimating

As part of the NBIMS standard, this open, IFC-based information exchange and the products supporting it will improve the quality of building design using BIM, by providing quantitative feedback to designers and owners about the projected cost to construct the building design. Building design and construction in the US will be improved if this exchange is made a standard because building designs will become more efficient beginning in early stages of design

IDM Submission Requirements

1. Process Maps - http://www.blis-project.org/IAI-MVD/IDM/GSA-004/PM_GSA-004.pdf
2. Exchange Requirements - http://www.blis-project.org/IAI-MVD/IDM/GSA-004/ER_GSA-004.pdf
3. Exchange Requirements Model Description - <http://www.blis-project.org/IAI-MVD/MVDs/GSA-004/Overview.pdf>
4. Exchange Requirements Model - <http://www.blis-project.org/IAI-MVD/reporting/browseMVD.php?MVD=GSA-004&BND=Generic&LAYOUT=H>

For convenience, the ERM can be downloaded in PDF format from: [http://www.blis-project.org/IAI-MVD/Snapshots/GSA-004_ERM_\(QTO\)_Design_to_QuantityTakeoff.pdf](http://www.blis-project.org/IAI-MVD/Snapshots/GSA-004_ERM_(QTO)_Design_to_QuantityTakeoff.pdf)

MVD Submission Requirements

1. Model View Definition Overview - <http://www.blis-project.org/IAI-MVD/MVDs/GSA-004/IFC2x3.pdf>
2. Model View Diagrams - <http://www.blis-project.org/IAI-MVD/reporting/browseMVD.php?MVD=GSA-004&BND=IFC2x3&LAYOUT=H>

For convenience, the MVD can be downloaded in PDF format from: [http://www.blis-project.org/IAI-MVD/Snapshots/GSA-004_MVD_IFC2x3_\(QTO\)_Design_to_QuantityTakeoff.pdf](http://www.blis-project.org/IAI-MVD/Snapshots/GSA-004_MVD_IFC2x3_(QTO)_Design_to_QuantityTakeoff.pdf)

Implementation Specifications:

Each MVD concept in the MVD diagrams is hyperlinked to the Implementation Guidance for that concept. Simply click on the MVD Concept box in the diagrams (either online web pages or the PDF download) to link to the implementation specifications web page in your browser.

Software Implementation Requirements

Implementation Support

As described above, several vendors have already implemented support for QTO in their products, as part of their implementations supporting the Concept Design BIM 2010 (CDB-2010). CDB-2010 rolls together the requirements of four IDMs into a single composite MVD. Implementations began in

Chapter 4.5– Design to Quantity Takeoff for Cost Estimating

September 2009. Vendors have been supported through the implementation process through a bi-weekly meeting in which questions are addressed, results are reviewed, and issues resolved.

Implementing vendors and products include:

Exporting Applications:

- Autodesk – Revit 2012 and AutoCAD Architecture 2012
- Beck Technologies – Dprofiler
- Bentley Systems – Bentley Architecture (during AECO)O)
- Graphisoft – ArchiCAD 15
- Data Design Systems – DDS-CAD

Importing Applications:

- Tocoman – TCM QTO
- Tokmo – Cost Estimating
- Digital Alchemy – IFC QTO

Certification Test Program

Certification testing began in October 2009. We expect that most of these applications will be certified for correct support of QTO in 2011 (as currently defined). Certification testing is MVD concept-based, and takes the unit testing approach. This means that there are tests for each and every bit of data required by the MVD. These tests are specific enough to ensure that the IFC BIMs being exported by certified applications are absolutely consistent and can be predictably loaded and analyzed by any certified QTO analysis application.

Sample Certification Test Results Package – http://www.blis-project.org/IAI-MVD/testing/GSA-005/DProfiler_CDB-2010_TestResults_02-Jun-11_3.zip

This package includes:

- Submitted IFC BIM file
- Certification Test Results Summary Report
- Certification Test Results Detailed Reports – 37 of these – one for each high-level MVD Concept (e.g. wall, door, window)

Use of this Information Exchange in Industry Projects

Pilot Projects using QTO

- GSA - has stated their intent to use the QTO exchange in a pilot project before the end of 2011.

Chapter 4.5– Design to Quantity Takeoff for Cost Estimating

- Statsbygg – has stated their intent to use the QTO exchange in a pilot project before the end of 2011.

QTO BIM Validation for end users

An online BIM Validation service is being developed and will be made public by end of 2011. This online service will enable end users to upload their IFC BIM to be checked for conformance to exchange standards defined by IDMs and MVDs. Checking IFC BIMs for conformance to the QTO information exchange will be supported by this service. Testing with Vendors has already begun.
